Sack rate %	**2.7** #11	**9.6** #10	Even
Havoc rate %	**16.0** #91	**19.9** #9	TEX

Pace and tendency

Both teams combined: **132.7 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
TEX Texas	**65.5** #67	**44.1%** #87
MIZ Missouri	**67.2** #53	**41.3%** #108

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **139.6 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
ISU Iowa State	**62.2** #100	**40.1%** #114
BAY Baylor	**77.4** #3	**46.8%** #61

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **124.7 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
TLSA Tulsa	**64.5** #78	**46.9%** #59
TULN Tulane	**60.2** #123	**46.3%** #64

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **131.6 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
MD Maryland	**66.4** #60	**54.8%** #11
PUR Purdue	**65.2** #70	**51.2%** #28

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **141.1 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
OKST Oklahoma State	**71.0** #17	**50.0%** #34
KSU Kansas State	**70.1** #24	**45.3%** #76

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **132.6 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
GAST Georgia State	**67.1** #54	**41.9%** #105
APP App State	**65.5** #67	**51.5%** #26

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **126.3 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
ULM UL Monroe	**64.8** #74	**50.4%** #31
ARST Arkansas State	**61.5** #114	**48.2%** #49

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **140.5 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
ALA Alabama	**61.5** #114	**46.2%** #65
LSU LSU	**79.0** #2	**46.8%** #60

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **137.9 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
ORE Oregon	**68.4** #37	**50.6%** #30
OSU Ohio State	**69.5** #29	**45.2%** #78

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **125.4 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
CLT Charlotte	**59.9** #125	**49.7%** #36
UAB UAB	**65.5** #67	**37.2%** #126

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **133.4 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
WKU Western Kentucky	**72.2** #10	**49.5%** #40
MTSU Middle Tennessee	**61.2** #117	**52.3%** #22

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **132.7 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
RICE Rice	**61.8** #110	**19.0%** #135
UNT North Texas	**70.9** #18	**49.0%** #44

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **129.2 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
MOST Missouri State	**61.6** #112	**45.6%** #71
FIU Florida International	**67.6** #48	**49.6%** #39

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **130.1 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
VAN Vanderbilt	**61.5** #114	**52.3%** #20
MSST Mississippi State	**68.6** #35	**47.5%** #55

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **139.4 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
USA South Alabama	**71.4** #13	**35.8%** #129
UL Louisiana	**68.0** #45	**37.0%** #127

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **131.9 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
UK Kentucky	**62.9** #95	**46.0%** #70
TENN Tennessee	**69.0** #34	**40.6%** #112

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **134.6 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
MIA Miami	**68.2** #40	**45.6%** #72
ND Notre Dame	**66.4** #60	**46.0%** #69

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **125.6 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
IOWA Iowa	**62.1** #105	**45.5%** #74
NU Northwestern	**63.5** #88	**40.0%** #115

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **133.3 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
OU Oklahoma	**64.2** #80	**47.7%** #53
FLA Florida	**69.1** #32	**43.2%** #94

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **142.1 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
WVU West Virginia	**73.9** #6	**24.3%** #134
TTU Texas Tech	**68.2** #40	**44.3%** #86

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **127.8 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
HAW Hawai'i	**70.4** #21	**61.7%** #1
UTEP UTEP	**57.4** #136	**43.3%** #93

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **120.8 plays per game** (FBS average 131.4)

Team	Plays / G	Early-down pass rate
WYO Wyoming	**56.6** #138	**35.3%** #131
UNLV UNLV	**64.2** #80	**39.9%** #117

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.
