3 wins vs 4.1 expected from points

EPA line vs. the market

The EPA line is what the ratings alone say about each game. A big gap is not a bet: more often the market knows something the ratings can't see, such as a quarterback injury, the weather or a team resting starters. Treat it as a game to look into.

EPA ratings, every FBS team

Net is offense minus defense, in adjusted EPA per play. The shift columns show how many spots a unit moves once schedule and garbage time are accounted for. The flags list results likely to even out. Select a column heading to sort.

# ↑	TEAM	RECORD	NET	OFFENSE	DEFENSE	PASS OFF.	RUSH OFF.	OFF. SHIFT	DEF. SHIFT	REGRESSION FLAGS
1	ND Notre Dame	6-0	**+0.34**	+0.24 #3	−0.10 #2	+0.27 #5	+0.12 #14	▲3	▲5	Turnover margin +10, likely to cool off

How the numbers are built

1. Take every pass and run play this season from cfbfastR play-by-play, which carries EPA and success for each play. FCS opponents are pooled into one team.
2. Drop garbage time (a lead over 43, 37, 27 or 21 points in quarters 1 to 4), kneels and plays wiped out by a penalty.
3. Fit one regression across all plays so each team gets an offense rating and a defense rating, with opponent strength and home field separated out. Pass and run get their own fits.
4. Project each game: each offense's rating plus the other defense's, times expected plays, plus 2.5 points for home field (none at a neutral site).
5. Pull the projected totals toward the league average. The spreads are left as they are: the regression already shrinks the ratings, and pulling them further made them worse.

Not included: quarterback injuries, weather, rest and travel, recruiting and last season's results.

Does it predict anything yet?

Each week from 3 to 7, ratings were built from earlier weeks only and used to project that week's 236 games. Average miss on the final margin, in points (lower is better):

The closing line still beats the ratings. For now they work best as context and as a way to flag games for a closer look, not as picks.
