Pace and tendency

Both teams combined: **125.5 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
WMU Western Michigan	**58.8** #132	**38.7%** #122
AKR Akron	**66.7** #58	**50.1%** #31

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **119.4 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
OHIO Ohio	**60.3** #123	**38.7%** #121
M-OH Miami (OH)	**59.1** #131	**42.2%** #103

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Sack rate %	**8.8** #119	**5.3** #98	Even
Havoc rate %	**12.5** #30	**12.0** #128	CMU

Pace and tendency

Both teams combined: **124.3 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
SAC Sacramento State	**63.7** #91	**50.9%** #29
CMU Central Michigan	**60.6** #122	**35.4%** #130

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **131.7 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
UL Louisiana	**66.8** #55	**35.9%** #128
ULM UL Monroe	**64.9** #74	**48.2%** #55

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **126.9 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
ILL Illinois	**61.9** #109	**49.4%** #36
UCLA UCLA	**65.0** #72	**38.1%** #123

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **129.9 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
CIN Cincinnati	**65.6** #68	**41.5%** #107
ISU Iowa State	**64.3** #82	**41.4%** #109

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **134.9 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
DUKE Duke	**66.3** #63	**43.3%** #91
MIA Miami	**68.6** #35	**47.5%** #59

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **132.0 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
WAKE Wake Forest	**64.4** #81	**48.5%** #50
SMU SMU	**67.6** #43	**48.2%** #54

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **133.8 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
NU Northwestern	**64.1** #85	**41.8%** #106
OSU Ohio State	**69.7** #24	**47.9%** #58

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **134.4 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
NEB Nebraska	**71.8** #9	**48.5%** #49
RUTG Rutgers	**62.6** #101	**45.5%** #75

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **128.0 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
ECU East Carolina	**67.9** #40	**45.2%** #81
CLT Charlotte	**60.1** #125	**48.6%** #46

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **125.5 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
ARST Arkansas State	**60.7** #121	**48.5%** #51
CCU Coastal Carolina	**64.8** #75	**48.5%** #52

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **122.9 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
TULN Tulane	**60.8** #118	**46.2%** #71
RICE Rice	**62.1** #107	**20.2%** #135

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **136.7 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
TENN Tennessee	**67.0** #50	**39.8%** #117
TA&M Texas A&M	**69.7** #24	**46.5%** #68

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **134.8 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
FIU Florida International	**67.9** #40	**49.0%** #41
DEL Delaware	**66.9** #53	**57.4%** #4

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Havoc rate %	**9.7** #8	**21.7** #3	Even

Pace and tendency

Both teams combined: **136.2 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
BAY Baylor	**75.4** #4	**46.8%** #65
BYU BYU	**60.8** #118	**45.5%** #76

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **136.8 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
CAL California	**70.0** #20	**59.2%** #2
UVA Virginia	**66.8** #55	**43.1%** #93

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **128.8 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
MICH Michigan	**59.9** #127	**40.3%** #115
ORE Oregon	**68.9** #33	**50.8%** #30

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **125.5 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
NEV Nevada	**61.9** #109	**42.3%** #102
NIU Northern Illinois	**63.6** #93	**53.6%** #14

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **133.0 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
JVST Jacksonville State	**61.2** #114	**44.8%** #83
WKU Western Kentucky	**71.8** #9	**48.5%** #48

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **134.0 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
FRES Fresno State	**59.4** #129	**46.2%** #72
TXST Texas State	**74.6** #5	**37.5%** #125

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **126.4 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
WASH Washington	**62.8** #98	**56.8%** #6
MSU Michigan State	**63.6** #93	**43.6%** #87

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **142.5 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
ORST Oregon State	**73.4** #7	**57.2%** #5
BOIS Boise State	**69.1** #30	**36.7%** #126

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **130.6 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
FLA Florida	**66.8** #55	**43.4%** #90
UK Kentucky	**63.8** #90	**46.1%** #73

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **129.2 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
MINN Minnesota	**62.2** #103	**52.4%** #20
PSU Penn State	**67.0** #50	**45.4%** #78

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **138.8 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
TROY Troy	**69.1** #30	**41.0%** #113
USA South Alabama	**69.7** #24	**36.3%** #127

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **144.9 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
TEX Texas	**65.7** #66	**45.5%** #77
LSU LSU	**79.2** #1	**48.3%** #53

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **127.8 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
PUR Purdue	**66.9** #53	**51.4%** #26
IOWA Iowa	**60.9** #116	**45.2%** #80

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Team	Plays / G	Early-down pass rate
SC South Carolina	**69.7** #24	**47.2%** #62
ARK Arkansas	**68.9** #33	**51.3%** #27

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **122.9 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
USU Utah State	**61.7** #112	**49.6%** #33
SDSU San Diego State	**61.2** #114	**42.1%** #105

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.

Pace and tendency

Both teams combined: **132.3 plays per game** (FBS average 131.2)

Team	Plays / G	Early-down pass rate
CSU Colorado State	**66.7** #58	**53.1%** #16
WSU Washington State	**65.6** #68	**55.5%** #9

Plays are runs and passes (sacks count as passes). Early-down pass rate = share of 1st- and 2nd-down plays that were passes. Rank 1 = most plays, most pass-heavy.

Longer bar, better rank. Ranks are out of 138 FBS teams. The edge goes to whichever side is better by at least one FBS standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. INT compares interceptions thrown by the offense with interceptions made by the defense. Rush Yds / Att is season rushing yards divided by rushing attempts, with sacks counted as rushes the way college box scores do. EPA / play (expected points added per play) and Success % (share of plays with positive EPA) use every run and pass play from cfbfastR play-by-play; for a defense they're what it allowed, so lower is better. Pts / trip (40) counts every drive that reached the opponent's 40, at 7 for a touchdown and 3 for a field goal. Explosive % counts passes of 20+ yards and runs of 10+ per play. Sack rate is per pass play; havoc rate is plays with a tackle for loss, sack, interception, fumble or pass breakup, per play. For both, lower is better for an offense and higher for a defense.
