EPA line vs. the market

The EPA line is what the ratings alone say about each game. A big gap is not a bet: more often the market knows something the ratings can't see, such as a quarterback injury, the weather or a team resting starters. Treat it as a game to look into.

GAME	DAY	EPA LINE	MARKET	SIDE GAP	EPA TOTAL	MARKET	TOTAL GAP

How the numbers are built

1. Take every pass and run play this season from cfbfastR play-by-play, which carries EPA and success for each play. FCS opponents are pooled into one team.
2. Drop garbage time (a lead over 43, 37, 27 or 21 points in quarters 1 to 4), kneels and plays wiped out by a penalty.
3. Fit one regression across all plays so each team gets an offense rating and a defense rating, with opponent strength and home field separated out. Pass and run get their own fits.
4. Project each game: each offense's rating plus the other defense's, times expected plays, plus 2.5 points for home field (none at a neutral site).
5. Pull the projected totals toward the league average. The spreads are left as they are: the regression already shrinks the ratings, and pulling them further made them worse.

Not included: quarterback injuries, weather, rest and travel, recruiting and last season's results.

Does it predict anything yet?

Each week from 3 to 8, ratings were built from earlier weeks only and used to project that week's 344 games. Average miss on the final margin, in points (lower is better):

The closing line still beats the ratings. For now they work best as context and as a way to flag games for a closer look, not as picks.
